8. GEOGRAPHICAL AREA IN WHICH SHIP WILL OPERATE (with reference to latitude and longitude)
The ship will operate inside fjords and along the continental shelf regiorn south of Iceland between 65

and 63° N, and between 13 and 20° W.

9. BRIEF DESCRIPTION OF PURPOSE OF CRUISE

Estimate terrestrial carbon fluxes from Eastern Iceland glaciers to the surrounding ocean.
Investigate submarine groundwater discharge from Eastern Iceland glaciers to the surrounding ocean.
Determine sediment-water exchange in situ using benthic chamber landers in fjords on eastern Iceland.
Investigate sediment properties and biogeochemical processes in sediments.

The cruise is sponsored by research grants from the University of Gothenburg and by the Swedish Research Council VR.

10. DATES AND NAMES OF INTENDED PORTS OF CALL

The vessel will spend the nights doing field work when weather conditions are suitable. If required, the vessel may go Eskifjörður, Reydarfjordur, Djupivogur or Hofn.

11. ANY SPECIAL REQUIREMENTS AT PORTS OF CALL

Part of the crew will fly to Iceland and will need to be picked up from the coast.
Two locations seem possible to be decided by the captain. Additional ports might be necessary to go to additional ports for shelter from bad weather.

NOTIFICATION OF PROPOSED RESEARCH CRUISE

1. PART B: DETAILS

1. NAME OF RESEARCH SHIP CRUISE NO.
R/V Skagerak
2. DATES OF CRUISE From: 20 September 2022 To: 28 September 2022

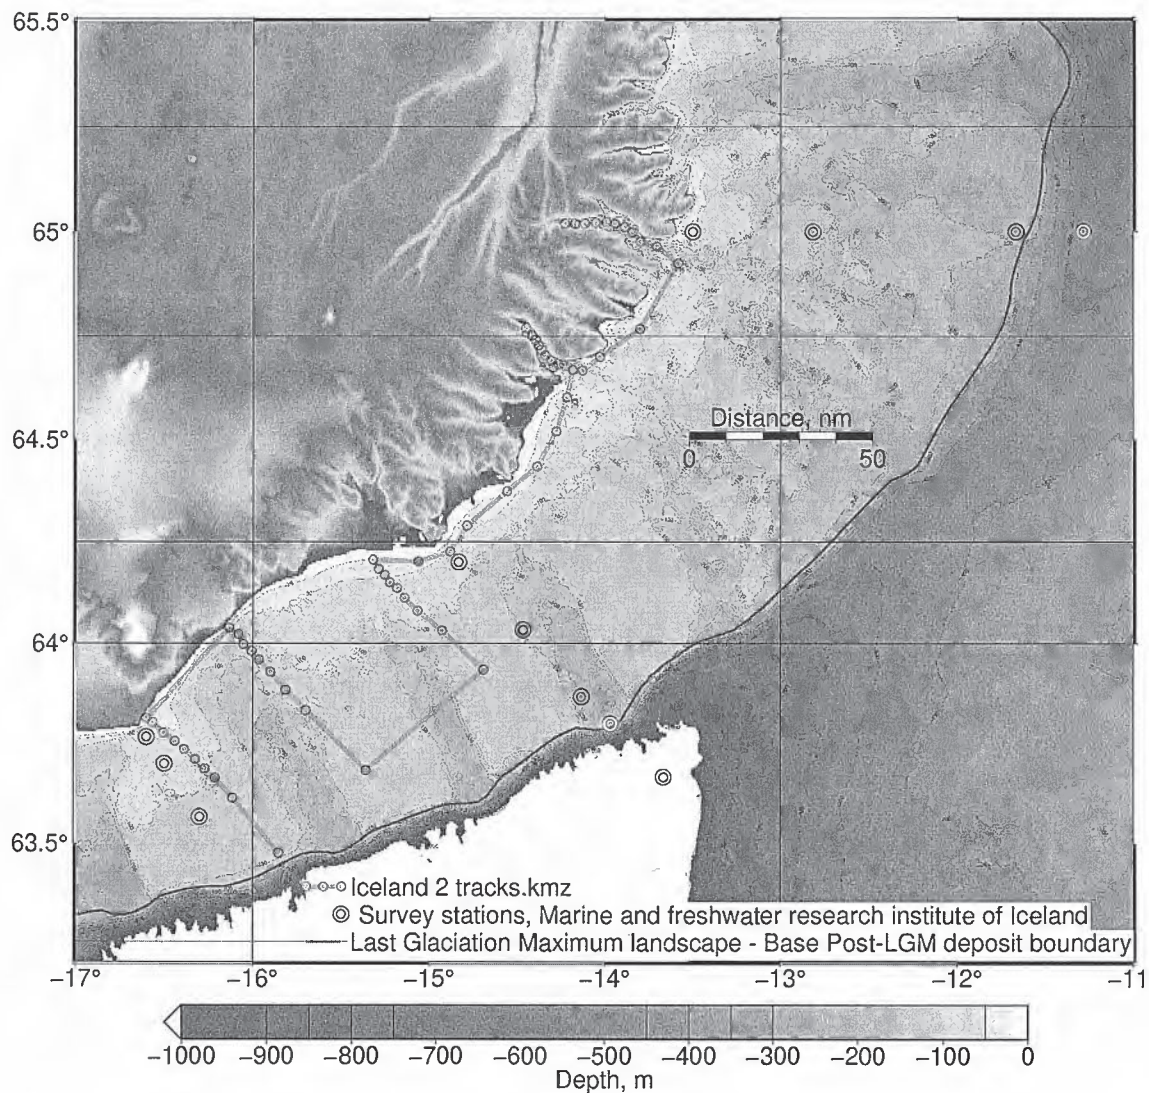

3. a) PURPOSE OF RESEARCH
Investigate submarine groundwater discharge from eastern Iceland to the surrounding Atlantic Ocean. Determine sediment-water exchange in situ using benthic chamber landers in fjords on eastern Iceland. Investigate sediment properties and biogeochemical processes in sediments.

b) GENERAL OPERATIONAL METHODS (including full description of any fish gear, trawl type, mesh size, etc.)

Multibeam echosounder and sonars.
Water column sampling using Rosette with water bottles or pumps.
CTD-Rosette profiling of water column.
Deployment of benthic chamber landers.
Sediment sampling using multiple corer, box-corer and/or GEMAX corer.

4. ATTACH CHART showing (on an appropriate scale) the geographical area of intended work, positions of intended stations, tracks of survey lines, positions of moored/seabed equipment, areas to be fished

Water and sediment samples will be taken along the track shown on the map. Coordinates of specific sampling locations are shown below. The sampling strategy involves transects starting as close to the shoreline as logistically safe. Each transect will extend to the continental shelf edge. We expect to take about 100 samples of seawater and sediments.
